Re: Burnt Fork

An inspection was made of Burnt Fork on July 16, 1958. It was apparent that the water supply was very critical in this area and there is some controversy between the users.

Each diversion has a measuring device and headgate installed with the exception of Island Lake. The critical water supply and the controversy between the users were discussed with Mr. Stoll, the water commissioner, and an agreement worked out between the users that the early priorities would relinquish some of their water that all users involved might have enough water to prevent burning of the hay crop which will be cut within the next 10 days.

It is recommended that the Interstate Canal Company construct a measuring device on the outlet of Island Park Reservoir and that next year the priority schedule be strictly adhered to.
